Data Analytics (DA)

Module-End -3

Module End Assignment:

"Analyzing E-Learning Platform Purchases using MySQL"

Summary Report:

Dataset: **6 learners**, **5 courses**, **8 purchases** (Jan to Apr 2025). Total revenue: 1,049.89. All figures come from the queries in **elearning_purchases.sql.**

Key insights:

- **Data Analytics** drives most of the revenue: 689.92 **(**66%) from 2 courses and 4 unique learners. SQL for Beginners is the top course, with 5 units sold and 449.95 in revenue.
- **Python Basics** has the **second-highest** course revenue (299.97). Anwar Basha buys it alongside SQL, so it works as a cross-sell product.
- Two learners bought from more than one category: Anwar Basha (India, 2 categories, 289.97 spent) and Andrea Fox (Brazil, 2 categories, 219.98 spent).
- **Business Excel Essentials** (49.00) has no purchases. Kelly Brown (UK) is also inactive, with no purchases.
- **Spending is concentrated**: Anwar Basha and Sara Khan together account for 559.94, more than half of total revenue.

Recommendations:

- Use SQL for Beginners as the entry course. Offer a Data Analytics bundle that includes Power BI and Python to grow the category that already sells best.
- Market **Business Excel Essentials** to existing Data Analytics buyers, since it has no sales yet.
- Send a re-engagement offer to inactive learners such as **Kelly Brown**.
- Give the Design category a clearer name (currently "Designs") so reports group it correctly with future design courses.

Data caveats:

With 8 purchases, these results describe the sample only. Top 3 in Q2 includes a tie for second place (**Power BI** and **Python** both have 3 units). Confirm the trends with the full purchase history before making business decisions.
